
AMORIM CORK FLOORING

Energy Savings Study

Did you know you can save up to 19% on energy with Amorim Cork Flooring?

Energy Savings

Study that determines the energetic savings based on the calculation of the thermal transmission coefficient of a concrete slab vs. a concrete slab with an Amorim Cork Flooring floor.

Cork is the outer bark of the cork oak tree, it's a natural raw material with unique characteristics and incredible benefits.

Because of its cell structure, cork is an excellent thermal insulator, with an amazing ability to retain heat. By incorporating this raw material in our products, combined with an advanced multi-layer technology, we guarantee up to 19% on energy savings.
